

ABSTRACT

Alfa interferon ( $\alpha$ -IFN or alpha-interferon) and liposomal all-trans retinoic acid is useful in cancer treatment with particular reference to renal cancer. Optionally, a regimen of  $\alpha$ -interferon from about 3 to about 5 million units sc daily and liposomal all-trans retinoic acid at from about 15 mg/m<sup>2</sup> to about 90mg/m<sup>2</sup>, or about 140mg/m<sup>2</sup>, or about 300mg/m<sup>2</sup> or more. Dosage periodicity of about three times per week for both drugs in about 8 week cycles is useful.
